SUMMARY

Enthusiastic final-year Computer Science Engineering student with a strong foundation in Python, IoT, and Web Development. Experienced in building practical solutions like smart safety systems and e-commerce platforms. Eager to leverage technical expertise in automation and full-stack development to contribute effectively to dynamic engineering teams.

TECHNICAL SKILLS

Languages: Python, C

Operating systems: Windows, Linux (Red Hat), Ubuntu

Web development: HTML, CSS, JavaScript

Tools: Visual Studio Code, NetBeans, Arduino, Jupyter Notebook.

PROJECTS

Smart Helmet 3.0 | IoT, MQ3 Sensors, IR Sensors

May 2025 – Present

- The motorcycle ignition is automatically disabled if the rider is not wearing the helmet or if alcohol is detected on their breath.
- The system is powered by a rechargeable battery, often supplemented by integrated solar panels on the helmet's exterior to extend battery life during long rides.
- In the event of a crash (detected by an accelerometer/gyroscope), the system uses a GPS module to pinpoint the location and a GSM module to immediately send an SOS SMS with coordinates to emergency contacts.

Shop Skin Care Website | OpenAI, Streamlit

Sep 2024 – Nov 2024

- Developed Shop Skin, an e-commerce platform that takes the guesswork out of skin care. It personalizes your skincare journey with a unique blend of technology and science.
- Web Design: Used basic HTML and CSS. Web Frameworks: Technologies like React.js for building a responsive and interactive UI.
- Backend: Python for machine learning models, APIs, and server-side scripting. Node.js for real-time data handling and seamless API integration.

Stock Prediction Analysis Platform | Python, Streamlit

Jan 2024 – Apr 2024

- Created an interactive stock analysis site using Streamlit, visualizing technical indicators like RSI, MACD, and Bollinger Bands.
- Implemented buy/sell signals and transaction history for users.
- Integrated a Hugging Face conversational AI for user interaction and PDF report generation.

Dark Pattern Detector for E-commerce | Python, Streamlit

Apr 2023 – May 2023

- Developed a website to assess e-commerce platform vulnerabilities, including SQL injection and Pop-up exploits.
- Integrated Hugging Face Mistral AI for summarizing results and generating reports.
- Enabled real-time safety evaluations by allowing users to input website links.

EDUCATION

A M C Engineering College

Bangalore, India

Bachelor of Engineering in Computer Science and Engineering; CGPA: 8.9/10.0

2022 – 2026

Rashtrorathana PU College

Bangalore, India

Karnataka State Board; Scored 90.16%

2020 – 2022

ACHIEVEMENTS AND CERTIFICATIONS

Global UiPath Automation Exam: Strong technical foundation in UiPath Studio and automation tools, proficient in designing and managing automated workflows.

Published Research Paper: Smart Helmet 3.0 for Motorcyclists in the International Research Journal on Advanced Engineering Hub (IRJAEH), Vol. 03, Issue 09, September 2025.

Infosys Springboard Virtual Internship 6.0: Acquired foundational expertise in Artificial Intelligence and Machine Learning through hands-on, team-based project development.

Zscaler Computer Networks Certification: Gained foundational knowledge of computer networking concepts, protocols, and cloud security principles.

Hackathon Volunteer AMC Engineering College :Supported event operations and participant coordination during a college-hosted hackathon.

Lila Poonawalla Foundation Scholar (2022–2026): Awarded the prestigious scholarship for academic excellence and leadership potential Supported event operations and participant coordination during a college-hosted hackathon.

Volunteer – Abhyudaya and Youth for Seva (YFS): Actively engaged in social sector initiatives based on personal interest, contributing to community development and educational support through NGO-led programs.
